Braga, Portugal

OBJECTIVE

I hold a Computer Science degree from the University of Minho and am currently completing a Master's in Computer Engineering at IPCA. Professionally, I have spent 1.5 years building POS/Scale software with C++, Qt, and MongoDB — work that gave me a strong foundation in performance and reliability. My Master's has since opened a new direction, diving into web and cloud development with Node.js, Express, and React, and exploring microservices architectures. I am now looking for a Full Stack or Backend role where I can put this new focus into practice.

EXPERIENCE

- **SDILAB**  Sep 2024 – Present
Software Developer
Braga, Portugal
 - Developed C++/Qt tooling for database schema validation, comparing defined schemas against live MongoDB instances and reporting discrepancies.
 - Implemented multi-level transaction logic using the mongocxx C++ driver, ensuring data consistency across complex operations.
 - Built a C++/Qt utility to compare and synchronize two MongoDB databases, automatically identifying and propagating missing or updated documents.
 - Built an SAF-T module for the ETPOS software.
- **Fnac Braga**  Jul 2021 – Nov 2023
Retail Assistant
Braga, Portugal
 - Provided exceptional customer service and built lasting client relationships through effective communication.
 - Performed store operations, including cash register management, inventory organization, and product restocking.
 - Managed high-volume interactions with empathy and professionalism, resolving customer issues efficiently.
 - Worked collaboratively with teammates to improve daily workflows and customer satisfaction.

PROJECTS

- **EORWAY — Cloud-Native Route Planning Platform** 2025 – Present
IPCA
 - Building a full-stack platform for outdoor enthusiasts to discover, plan, and navigate routes, featuring interactive maps, elevation profiling, and points of interest — available on both web and Android.
 - Designing a microservices backend with NodeJS + ExpressJS, exposing RESTful APIs via an API Gateway with JWT authentication, WebSocket real-time communication, and RabbitMQ for asynchronous event-driven messaging.
 - Developing a React SPA with client-side routing and responsive layout; and a native Android app in Kotlin with MapLibre SDK, push notifications, SQLite offline storage, and automatic delta sync on network restoration.
 - Setting up infrastructure provisioning with Terraform and CI/CD pipelines via GitHub Actions, with full containerisation using Docker Compose.

NodeJS · ExpressJS · React · Kotlin · MySQL · SQLite · RabbitMQ · Docker · Terraform · GitHub Actions

TECHNICAL STACK

- **Languages & Frameworks**
NodeJS, TypeScript, JavaScript, ExpressJS, React, Kotlin, C, C++, Qt/QML, HTML, CSS
- **Databases**
MongoDB, MySQL, SQLite
- **Tools & Platforms**
Docker, Kubernetes, Terraform, Git, GitHub Actions, RabbitMQ, RESTful APIs, WebSockets

EDUCATION

- **Polytechnic University of Cávado and Ave** Sep 2025 – Present
Msc. in Computer Engineering
Barcelos, Portugal
- **University of Minho** Graduated Jul 2024
Bsc. in Computer Science
Braga, Portugal
